

Children play in the park while their parents watch over them. Their parents watch out for any signs of trouble, constantly looking for outside dangers and making sure their children are not doing anything unsafe. They cannot guarantee that the children will not accidentally fall or hurt themselves playing, but they are there in case anything happens and are always on the lookout for safety concerns.

The **Kemper Technology Consulting Proactive Monitoring Service** does the same for your network, servers and workstations. We keep an eye on your computer systems and are immediately notified when something is starting to get dangerous and is a threat to your business operations. We cannot guarantee that nothing will go wrong, but we are always on the lookout.

With services starting as low as \$7.00 per month, you can have the peace of mind that comes with round the clock monitoring of your key systems. Contact Kemper Technology Consulting to find out what our Proactive Monitoring Service can do for you. Call (800) 887-4995.
